

GEMINI 2000

CONTACTLESS EMV PAYMENTS

Fully certified contactless payment solution designed for EV chargers

Visa and Mastercard acceptance, including Google Pay and Apple Pay

Fast transaction processing, detailed reporting and easy refunds

Highly secure system certified to Payment Card Industry standards

Fast delivery, working directly with UK manufacturer

TAP INTO CONTACTLESS

Tap into the potential of contactless with Gemini 2000, a specialist manufacturer based in the United Kingdom. For over 25 years, we've helped businesses large and small offer seamless contactless acceptance into electric vehicle chargers, ticketing kiosks, vending machines, and more.

Contactless terminal

The uCrypto contactless reader offers acceptance of Mastercard and Visa bank cards, smart-phones and wearables. The reader comes with a bright graphic display and an optional EVA mount.

The terminal features a Linux micro-computer that hosts business logic and provides connectivity options such as Ethernet, WiFi or 4G.

Two-part design option

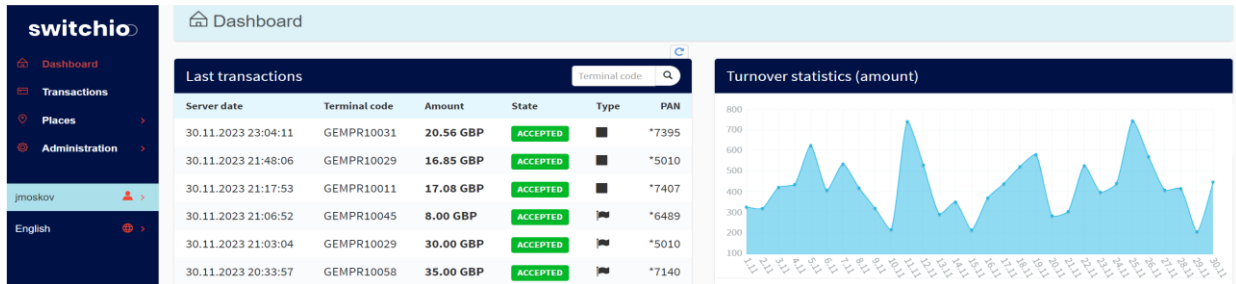

A two-part option – with separate reader and micro-computer terminal connected by a cable – is available in case you prefer to position modules apart and more conveniently inside the charger enclosure.

All hardware is designed and built in the UK and can be delivered fast to customers locally and globally.

SALES PORTAL

Reporting

Merchants have 24/7 access to real time reporting via the Switchio platform. Log in to generate terminal sales reports or drill down into individual transactions at a click of a button. Refunds and receipts are easy to issue.

GETTING STARTED

Test and development kit

Evaluate the Gemini 2000 solution with our £199 starter kit. This includes a reader, terminal, ICC test card and set up in our test environment. Contact us to order.
